

We have implemented the complete foundation and core business flow of the Project Budget Tracking application. The super user configures roles, permissions, modules, product groups, and services from the administration panel. Client and client POC management is integrated and can be created directly from the quotation flow. The quotation pipeline initiates the business process and approved quotations are converted into projects with budget tracking. Task management with user assignment, timers, and timesheet automation is completed. Invoice generation from quotations and revenue reporting is implemented. Currently, we are focusing on purchase order integration, optimization, and testing.

Step-by-Step Functional Explanation (End-to-End)

1 Super User Login & Administration Setup

The system starts with the **Super User logging in using credentials**.

Administration Tab

From the Administration section, the super user configures the system:

- **Role Creation** (Admin, Manager, Finance, User)
- **Permission Assignment** (Create, View, Edit, Delete per module)
- **Module Configuration**
- **Product Group Creation**
 - Services
 - Outsourcing
 - Expenses
- **Product / Service Creation**
 - SAP QM → Services
 - Freelancer → Outsourcing
 - Hosting / Travel → Expenses

This setup defines governance and financial structure.

2 Client & POC Management

Client Creation

- Clients can be created and managed centrally
- Client details include company name, address, tax details, etc.

POC (Point of Contact) Creation

- Each client can have one or more POCs

- POC includes name, email, phone, and role

Inline Creation from Quotation Page

- On the quotation page, users can create **Client and POC directly using the “+” icon**
- No need to leave the quotation flow

This improves usability and reduces data entry friction.

Quotation Pipeline (Business Entry Point)

After admin setup, the process moves to the **Pipeline**.

Create Quotation

Required fields include:

- Client
- Client POC
- Quotation date
- Products / services
- Quantity, price, tax
- Total amount
- Quotation status

At this stage, the quotation represents **potential revenue only**.

Quotation Confirmation

Once confirmed:

- Financial scope is locked
 - Quotation becomes eligible for project creation
-

Project Creation & Budget Setup

After quotation approval, a project is created.

Project Creation Screen

The project creation page contains **two sections**:

Project Details

- Project name
- Client
- Project manager

- Start and end dates

Budget Details

- Budget can be:
 - Manually entered, or
 - Auto-filled from the approved quotation

This allows flexible budget control.

5 Task Management & User Assignment

Once the project is created, tasks are added.

Task Creation

- Tasks are created under the project
- Tasks are assigned to specific users
- Estimated time and priority are defined

User Login & Task View

- Assigned users log in using their credentials
 - Users can view only their assigned tasks
-

6 Timer, Timesheet & Approval Flow

Task Timer

- Timer starts when the user begins work
- Timer can be paused during waiting or dependency states
- Timer stops automatically on task completion

Timesheet Automation

- Task time is automatically recorded in the timesheet

Time Extension Request

- If a task cannot be completed within estimated time:
 - User requests additional time
 - Request goes to the manager or authorized role
 - On approval, extra time is added automatically
